Hinan Bilal

Senior Java Full Stack Engineer | Spring Boot · Microservices · Kafka · AWS
Pakistan

Summary

Senior Java Full Stack Engineer with 5+ years of experience building scalable, high-performance enterprise systems across fintech, banking, telecom, and government sectors. Specialized in microservices architecture, event-driven systems with Kafka, and cloud-native solutions on AWS. I've delivered production systems at scale, including a centralized ELK stack processing 1TB+ logs, retail banking platforms serving 375+ branches, and backend infrastructure for a US media platform with 150M+ monthly users. My core skill set includes:

- Java (Java 17/21), Spring Boot, REST APIs
- Microservices Architecture, Distributed Systems
- Kafka, Event-Driven Systems
- PostgreSQL, Redis (caching and performance optimization)
- AWS (Lambda, S3, Step Functions, CloudFormation), Docker
- ELK Stack (centralized logging and observability)
- System Design, Scalability, High Availability
- Machine Learning integration with Java-based production systems

Beyond engineering, I lead teams. At Confiz I serve as both Senior Engineer and Line Manager, defining KPIs, mentoring engineers, and driving architectural decisions across multiple government transformation projects. Entrepreneur at heart, I built PakistanTravelAdvisor.com from scratch, grew it to 10,000+ visits and 7,000+ community members, and sold it to a Swedish entrepreneur in 2022. I also publish on Medium and maintain open-source Python packages on PyPI. Open to senior engineering and lead roles — remote, hybrid, or onsite. Actively targeting opportunities in the GCC region and globally.

Experience

Confiz

Sr. Software Engineer | Line Manager

June 2025 - Present (1 year 1 month)

Islāmābād, Pakistan

- Served as a Line Manager and Senior Engineer, managing and mentoring engineers, defining KPIs, conducting performance evaluations, and ensuring high-quality, timely delivery across multiple teams.
- Contributed to development of enterprise-grade government systems, participating in architectural decisions and building scalable, high-performance solutions.
- Designed and deployed a centralized ELK stack processing 1TB+ logs, integrated across multiple platforms, significantly improving observability and log analytics in distributed systems.
- Contributed to backend development and architectural design of large-scale public sector systems, supporting digital transformation using Java and Spring Boot-based microservices.
- Led design and implementation of a asset and operations management system, handling lifecycle management, assignments, transfers, and multi-level approval workflows.
- Led development of a workflow-driven workforce management system, enabling task assignment, automation, performance evaluation, and incentive processing for external stakeholders.
- Mentored engineers through code reviews, technical guidance, and best practices, improving team productivity and overall system quality, conducted 50+ technical interviews.

Systems Limited

3 years 8 months

Consultant

August 2023 - May 2025 (1 year 10 months)

Islāmābād, Pakistan

- Worked with e&(UAE Telco) B2B portal.
- Managed functionalities such as client organization document handling, expiry notifications, and customer portfolio detail aggregation.
- Used optical character recognition for document validation and TIBCOs EDMS for document storage.
- Designed and implemented microservices architecture using Java Spring Boot.
- Ensured seamless inter-service communication via Feign Clients and transaction logging.
- Worked on retail banking platforms for a Pakistani bank with 375+ branches.
- Contributed significantly to Java backend services.

- Successfully delivered modules including:
- RAAST P2P & P2M functionalities (Registering Raast, Link/Delink, Fetch Title, Transaction)
- Managed telco partner services (recharge, bill payment, bundle subscriptions)
- Facilitated Utility Bill payments (government fees, education fees, Gas, Electricity, etc.)
- Led modules on Billing Favorites Management and oversaw the entire Card Management journey, including:
 - Ordering a new card
 - Activation/deactivation (HOT, WARM, COLD)
 - PIN changes
 - Transaction management (POS/ ATM/ ECOM)
- Implemented features like IBFT, FT, wallet top-up, and receipt management for transactions.
- Ensured seamless communication with users through email, push notifications and SMS delivery module.
- Savings pot for letting users create a virtual account besides the main account and save money for a target like a car or a master's degree.
- Personal Finance Management, pie charts, and bar graphs for visualizing where the user spends money every month. Graphs are backed by the bills, funds transfers, educational, charity payments etc performed by the user on the app.
- Used MYSQL as a DB, and worked extensively with DB procedures.

Junior Consultant

August 2022 - August 2023 (1 year 1 month)

Islāmābād, Pakistan

- Digital transformation of a Dubais Govt department. Used springboot, Java 17, microservices.
- POC for Digi Malaysia telco reload app. Used java 17, springboot, microservices, AWS.
- Worked on a US-based news giant as a backend developer.

This year, their digital platforms garnered 156.9 million monthly page views. Established 177 years ago, this news agency has achieved annual revenues totalling 510 million USD.

Associate Consultant

October 2021 - August 2022 (11 months)

Islāmābād, Pakistan

- Worked with a fortune 500 bank in Silicon Valley, building data pipelines using Python.
- Led an IoT-based proof-of-concept (POC) project for a UAE-based client:
 - Objective: Gather and analyze taxi drivers' health data for real-time surveillance.
 - Utilized MQTT for data transmission and machine learning clustering algorithms for fatigue prediction.
 - Implemented proactive engagement with drivers via Firebase push notifications to prevent traffic mishaps based on the predicted fatigue levels.
- Contributed to cloud management for a fortune 500 biotech giant with a market capitalization of \$104.06 billion:
 - Utilized AWS services including Lambda, Step Functions, CloudFormation, and S3.

PakistanTravelAdvisor.com

One-Person Tech Venture

June 2020 - December 2021 (1 year 7 months)

Islāmābād, Pakistan

- Introduced a comprehensive travel search engine for Pakistan
- Three key components:
 - Travel packages aggregator showcasing offerings from top agencies with company profiles
 - Hotel aggregator listing top-rated accommodations with rental options from multiple booking platforms
 - Machine learning-powered itinerary planner optimizing hotel and flight selections based on trip duration and budget
- Data for the search engine was crawled from the web every 12 hours using BeautifulSoup cron jobs
- At the time of closing:
 - 50+ trips booked
 - 20 hotels bookings
 - 10,000 website visits
 - 7000+ active users in the Facebook group community
- Committed to allocating 5% of profits towards initiatives supporting disaster preparedness and combating climate change in tourism-reliant regions
- Got acquired in early 2022 by a solo Swedish entrepreneur.

Fiverr

Backend Engineer & Machine Learning Engineer

October 2020 - September 2021 (1 year)

- Delivered Java/Python backend and infrastructure-related projects utilizing technologies such as Redis, Elasticsearch, Postgres, AWS Amplify, and Vue.js.
 - Implemented microservices including:
 - API gateway
 - Load balancer
 - Discovery services
 - Config service
 - SQS
 - HTTP Feign client for service communication
 - Led a team of 3 developers to successfully deliver 50 projects in data analysis, visualization, and machine learning.
 - Utilized supervised algorithms such as linear/logistic regression and decision trees/random forest, along with unsupervised algorithms like k-means clustering and DBSCAN.
-
